

# Clear Protection you can trust

## 3M™ Scotchgard™ and Ventureshield™ Paint Protection Films

Advanced technology can boost resale value and customer satisfaction

- Super tough - Transparent urethane film helps protect paint from stones, sand, road debris, bug acids and other harsh conditions that mar that new car finish and eat away at your customer's investment. It helps to safeguard vulnerable painted surfaces like the leading edge of the hood, bumper, door edges and trunk ledge.
- 3M Paint Protection Film is made of tough, transparent and conformable urethane for long-term durability, and it can be treated like any painted surface. This enables your customer's vehicle lines and colour brilliance to show through without compromising the appearance, increasing pride of ownership.
- The high-performance, pressure-sensitive adhesive used to attach 3M film ensures excellent adhesion to OEM paints, yet is removable if needed. This prevents costly field failures while allowing for removal without damage to fully cured paint.
- Scotchgard™ film features a clear coat with ultraviolet (UV) protectants that counteract harmful UV rays and resist yellowing. Businesses can be assured that Scotchgard™ film maintains its high-gloss look with minimal care, while helping to keep vehicles looking better longer.
